June 2026

Hi, SCAN Folks!

We are officially in summer! Welcome to the heat and humidity of South Carolina after the summer solstice. We are getting the newsletter out a little late, but we've been working on a lot of SCANNing. Last month was the annual Hell Hole trip where there were many herps and other exciting species were observed. Check out Kim's report below! We also had a Director's Special: a soodle, BBQ, and Celebration of Life for Jerry Bright. And this month we are going to Catawba Nation Trailways in York County, a trip we've been working on for a couple of years. It will be hot, so make sure you bring appropriate supplies to beat the heat. Also, here is another call out for photos and short natural history pieces for our books and presentations. They don't need to be masterpieces; we simply want member contributions. Please help! [Upload photos here](#) or email scnaturalists76@gmail.com.

AND... The main event of the year is coming up in July: SCAN's 50th Anniversary Gala! Yes, SCAN has been around for 50 years. Let's all come together July 25th at the SC State Museum in Columbia to celebrate our Golden Anniversary. Look for a separate email with the invitation this week.

Lee Morris, President

Last Month: Francis Marion National Forest and Blessing Plantation

I was sorely tempted to simply copy/paste the opening paragraph from last year's newsletter. The weather was remarkably similar! It was absolutely gorgeous most days, with highs in the 80ies and lows in the 60ies. Then Sunday came and with it, rain. It also rained a bit on Monday. The precipitation was desperately needed as Charleston and Berkeley Counties are still in an extreme drought (D3) classification. The upside is that there were very few mosquitoes and only a few areas with annoying deer flies.

Blue Springs was a popular destination, with groups going almost every day to check out the clear, cool water bubbling up from the ground. Florida Bay was also explored several times. There were fewer carnivorous plants than in previous years and the area was mostly dry. The roads were in good condition, allowing everyone to explore widely.

My non-scientific impression is that we saw more snakes than last year. The cottonmouths were mostly young and small. The copperheads had beautiful markings. There were fewer insects, frogs and turtles in evidence. The Chuck-will's-widows were notably quiet, which was disappointing and also allowed for somewhat uninterrupted sleep.

A special highlight was witnessing Gabe Schuler and Maddie Prickett doing a bit of research for the [Amphibian and Reptile Conservancy](#). They took blood samples and measurements from a very fat Garter Snake, a Pygmy Rattlesnake, a Copperhead and Water Moccasin. The data was sent to a researcher studying the presence of PFAS (per- and polyfluoroalkyl substances, AKA "forever chemicals") in reptiles.

On Saturday, a large group of us soodled around Blessing Plantation. It was a special trip as the property is not yet open to the public. The house on the property was beautiful and, more practically, had functional plumbing. Highlights included a beautiful view of the Cooper River from the dock, disappearing into the brush

as a few of us attempted to follow Gabe Shuler as he explored along a creek, and learning the history of the property. Thanks to Marcus Sizemore and Tom Austin for their efforts in setting up the trip.

The annual potluck dinner at the Hell Hole Camp was well attended. Folks gathered around the fire, swapped stories, and caught up on gossip. The evening road cruising was pleasant, even if we didn't see a ton of critters.

This Month: Catawba Nation Trailways in York County

We're very excited to visit another special place this month. Join us as we document species diversity for the Catawba Nation on their lands along the Catawba River.

Kim McManus, Secretary and Web Keeper

Catawba Nation Trailways

York County, SC

1175 Charley Horse Rd, Rock Hill, SC 29730

[34.9079770, -80.8733443](tel:34.9079770,-80.8733443)

June 27, 2026 | 10:30am – 4:30pm

After an excellent director's special, the official June SCAN outing is to York County, home of the Catawba Nation. We will be meeting at the boat launch parking lot at the end of Charley Horse Road. There is not a restroom in this parking lot, but you could stop at the cultural center to use the restroom before arriving, which is located [HERE](#). We will be strolling through a series of trails and looking at a small grassland area. We will be parking in the middle of the greenway trail which will allow for options going north and south along the trail to other points of interest. None of the trails are particularly long but if it is as blazing hot as last Saturday that will be a good thing. Most of the trail is well-shaded and the Greenway trail parallels the river where you could cool off when needed with easy access at the boat ramp. We should have plenty of time to explore the bottomland flora and fauna along the river.

The Catawba Nation has a long history along the river and claimed land (~ 144,000 acres) all the way into present-day Virginia. They are currently the only federally recognized tribe in SC. They began the process in 1973 and it took 20 years to finally come to a settlement that awarded them 4200 acres. However, that number has been slow to come to fruition. Just this March they were able to acquire an additional 200 acres, which now brings their total to around 1500 acres. You can check out more about their history at their website: [The Catawba Nation](#).

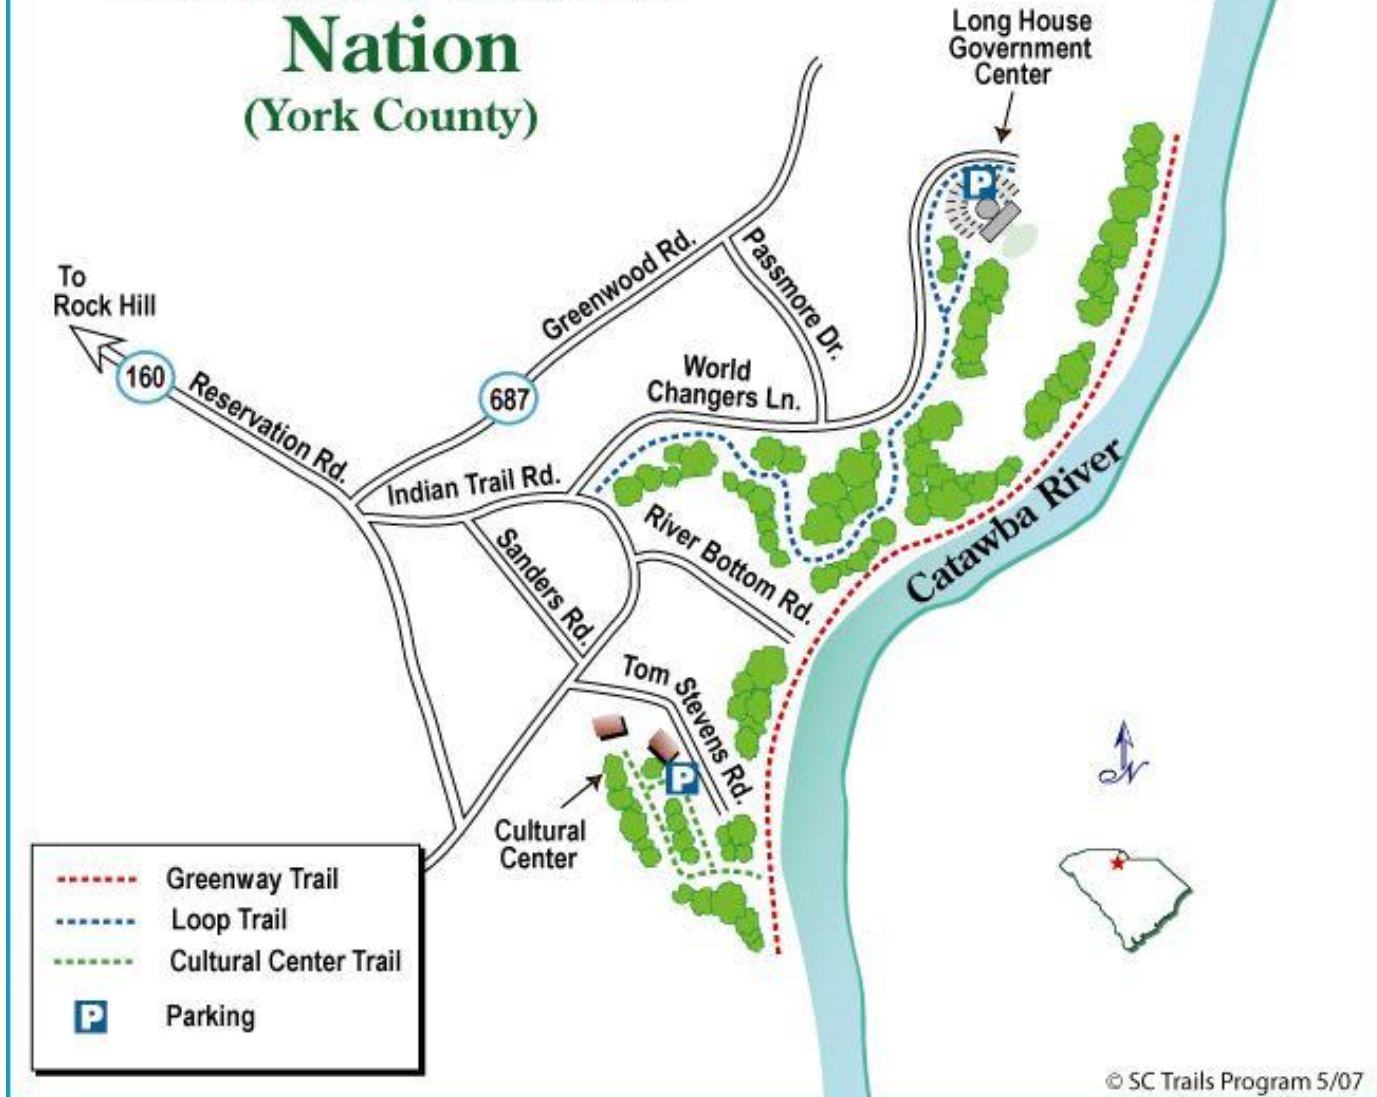

Rivercane was an important part of their culture and ecosystem (used for basketry and musical instruments) and they have begun a restoration project of creating a rivercane buffer along their section of the Catawba River. Rivercane can pull out between 80-85% of Nitrogen and Phosphorus agricultural runoff before it enters the waterway. Video: [Catawba Nation Rivercane Restoration](#)

Also, if anyone has time on their way out please stop by the food distribution center as there is a small grassland that they are beginning to restore and would love to know what we find there. Please see the attached photo for location.

We should be able to find some cool spiders, dragonflies and other insects along the vegetation. Along the trails and forest edges, there were a number of birds and during the scouting trip an osprey and bald eagle were seen over the river. Come join us for another June SCAN soodle, this time up in York County.

Regional Director: Todd Johnston

Catawba Indian Nation (York County)

The cultural center trail is about 0.6 miles.

The Loop trail is 0.8 miles.

The greenway trail is 1.4 miles

Note - The red G is where the small grasslands are at the food distribution center.
